Day-02 Assignment

Advantages and disadvantages of Waterfall Model

Advantage of waterfall model	disadvantages of Waterfall Model
Works well when the requirements are clear from the start of the project	Time and money has to be committed early to support the planning phase
Project risk is anticipated from the beginning so gives time for mitigation	Agreed changes in scope can be slow to implement and affect the project timeline
Best if critical resource has limited availability	Accidental scope creep adds effort and cost, decreasing the project value, so controls must be effective
Roles and responsibilities are defined early reducing the risk of misunderstandings or gaps in delivery	Project value can only be realized at the end of the life cycle

Kanban:

A visual frame work that aimed in Work-In-Progress (WIP) and maximizing efficiency. A work-in-progress limited pull system is the central mechanism to uncover system operation (or process) complications and encourage collaboration to continuously improve the system.

It uses physical or Digital “Kanban board” to do its task track and easily maintained . Kanban board have some task track multiple work flow which are given below (eg: To do , In progress, validation , Completed).

Example Kanban Board :

KANBAN BOARD

TO-DO	IN-PROGRESS	VALIDATION	COMPLETED
